Create a folder with name "Task-1" in the repository and perform the Git operations using Git Bash.

```
asus_@LAPTOP-5674KGJ4 MINGW64 ~ (master)
$ pwd
/c/Users/asus_

asus_@LAPTOP-5674KGJ4 MINGW64 ~ (master)
$ ls
'3D Objects' /
AppData/
'Application Data'@
BullseyeCoverageError.txt
Contacts/
Cookies@
Documents/
Downloads/
Favorites/
Links/
'Local Settings'@
Music/
'My Documents'@
```

Creating a folder named Task -1 and open git bash in that location.

I have also created a text file in folder Task -1.

The git init command creates a new Git repository. It can be used to convert an existing, unversioned project to a Git repository or initialize a new, empty repository. Most other Git commands are not available outside of an initialized repository, so this is usually the first command you'll run in a new project.

```
asus_@LAPTOP-5674KGJ4 MINGW64 ~/Documents/Task -1 (master)
$ git init
Initialized empty Git repository in C:/Users/asus_/Documents/Task -1/.git/

asus_@LAPTOP-5674KGJ4 MINGW64 ~/Documents/Task -1 (master)

The git checkout command is **used to switch between branches in a repository.**

One branch is there named master.

- ✧ **Git checkout**
- ✧ **Git checkout -b**

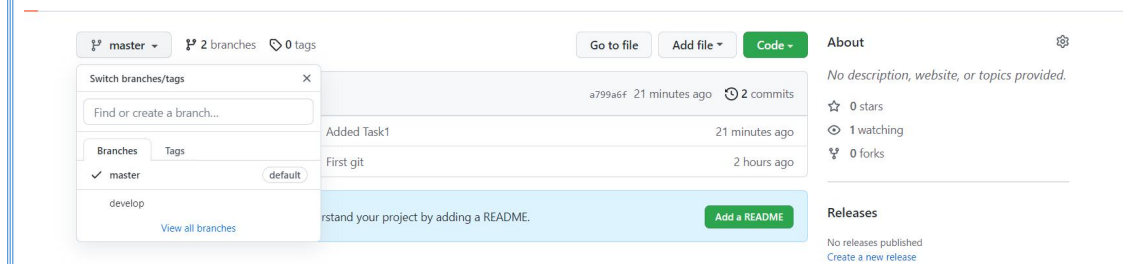

```
asus@LAPTOP-5674KGJ4 MINGW64 ~/Documents/Task -1 (master)
